Troubleshooting Network Card Device Drivers

Nohau is aware of potential device driver conflicts with certain network cards running on Novell/Netware networks. Problems have been reported with both 3COM ISA network cards and some Novell network cards. Most of these problems have been experienced when running Windows NT or Windows 2000 operating systems.

Possible Symptoms

- When starting Seehau, communication with the network stops. (You will be unable to access resources on the network.)
- Seehau will not start.
